

REVIEW/DISCUSSION SESSION 1

Some logistics:

- feel free to leave your camera off,
- discussion can occur through the chat or verbally (unmute yourself and speak up),
- session will be recorded, and posted on Moodle (only).

Tentative outline:

- for each of lectures 1a and 1b:
  - \* discussion/questions about topics?
  - \* questions about do-files? (review of selected parts?)
- discussion of Linear Regression Exercise (VER 14) # 1, with Stata demonstration,
  - \* all program files posted at VHM 802 Exercises page,
  - \* also solution file (.pdf) posted this morning,
- (optional) discussion of extra exercises from “Exercises for Session 2: Linear and multiple linear regression”,
  - # 1: simple linear and polynomial regression, outliers, transformation,
  - # 2: residuals and diagnostics for simple linear regression.
